PROFILE

I have always been awed by coding and fascinated by the variety of color codes on the screen. I was obsessed with writing codes and spent years teaching myself programming before getting formal education in coding. I like to envision products, and being able to craft and code my thought into existence brings me joy like no other. I celebrate and learn from every project that I accomplish. I am optimistic that my skills are ready to serve the word of technology.

SKILLS

- HTML
- CSS
- JavaScript
- SASS
- React.JS
- Document Object Model (DOM) APIs
- Express.JS
- Node.JS
- Web API
- User Authenticator
- MySQL
- Agile Development
- Heroku
- Netlify
- GitHub

PROJECTS

Full-Stack Engineer/ Full-Stack Developer

FEB 2023, CAPSTONE PROJECT, BrainStation

- Full-stack web application called **Job Application Tracker** for tracking and managing job applications.
- Application features
 - Retrieving, Parsing and rendering email into client-side web page
 - Scheduling interviews in real time
 - Send follow up emails after the completion of interview

Front-end engineer/developer

FEB 2024, BrainStation Industry Project

- The WINNER of a week-long collaborative hackathon in partnership with **Fiserv**.
- With a UX Designer and Data Scientist, we design and built a web application with the specific goal of reducing wait times during restaurant checkout and improving dining experience.
- App features **split cheque logic** that allows dinners to either split cheques evenly or split cheques by individual orders and **expedite the payment** without the need for a server.
- I was tasked to code and develop landing page and the Review Orders section of the home page.
